EC Approves TEPKINLY Combination for Relapsed/Refractory Follicular Lymphoma

🏢 epcoritamab

🏢 AbbVie

🌐 European Union

The European Commission has approved AbbVie's TEPKINLY (epcoritamab) in combination with lenalidomide and rituximab for relapsed or refractory follicular lymphoma, marking a regulatory expansion for the bispecific antibody in Europe. TEPKINLY is already approved by the FDA as monotherapy for relapsed/refractory diffuse large B-cell lymphoma and follicular lymphoma, making this combination approval a strategic extension into triplet regimens. The approval provides a new treatment option for patients with relapsed or refractory follicular lymphoma in the EU, though the source does not disclose the pivotal trial data supporting this combination authorization. This combination approach may position TEPKINLY competitively in the crowded follicular lymphoma market by leveraging established agents lenalidomide and rituximab.

AbbVie · July 6, 2026 13:45 ET · Oncology

Less

Indication: relapsed or refractory follicular lymphoma

Event: European Commission granted marketing authorization for AbbVie's TEPKINLY (epcoritamab) in combination with lenalidomide and rituximab for relapsed or refractory follicular lymphoma

Regulatory status: Marketing authorization granted by European Commission for relapsed or refractory follicular lymphoma; TEPKINLY already FDA-approved as monotherapy

Strategic significance: Expands TEPKINLY's approved indications in Europe beyond monotherapy to include triplet combination regimen for follicular lymphoma, leveraging established agents lenalidomide and rituximab

Commercial implications: Combination approval may differentiate TEPKINLY in the competitive follicular lymphoma market and broaden prescriber adoption through triplet regimen option

Why this section: Final EC approval for a novel bispecific antibody combination in relapsed/refractory follicular lymphoma represents meaningful label expansion in a competitive oncology segment with established commercial infrastructure.
