Page Title

Subject: Feedback and Proposed Next Steps for Daily Bites AI Model

Dear Rutvik,

Thank you for taking the time to discuss the recent outputs and clarify the underlying workflow.

Following our review of the files shared and our subsequent discussion, I would like to summarize our feedback and the proposed way forward.

Key Observations

1. News Capture Performance

- There is a noticeable improvement in the model's ability to capture relevant news compared to the earlier versions.
- When benchmarked against our Daily Bites edition dated 30 June 2026, the model captured the majority of the relevant news items from the source websites (7/8). This is encouraging.
- As discussed, our primary objective is to **avoid missing relevant news**. If a few additional news items are captured, they can be filtered during review; however, omission of important developments is a greater concern from our perspective.

Areas Requiring Further Improvement

A. Content Quality

The next major area for improvement is the quality of news summaries.
Ideally, the output should be closer to our current Daily Bites style and should clearly capture:

- Key event/update
- Strategic significance
- Regulatory status
- Clinical development stage (where applicable)
- Commercial implications

At present, many summaries still appear generic one liner and require additional contextualization. Our current Daily Bites structure to be considered as the minimum benchmark for both content quality and presentation style.

B. News Categorization

Further refinement is needed in the classification of news between:

- **Key Highlights**
- **Other News Highlights**

The categorization does not always align with the relevance and strategic importance criteria that we currently follow internally.

Proposed Next Steps

To improve the model further, I suggest focusing on:

1. Improving summary writing quality and contextual understanding.
2. Refining categorization between Key Highlights and Other News.
3. Using additional Daily Bites examples from our side to fine-tune output quality.
4. Maintaining the current focus on maximizing news capture while improving precision and presentation.
5. Subsequently validating performance across additional dates and source websites before expanding the scope further.

Please find below additional examples that should help further train and fine-tune the model, particularly with respect to content style, news summarization, prioritization, and categorization in line with our Daily Bites requirements.

Please find below updates for 29th May 2026,

Key News Highlights:

Molecule/Particular	Highlights (Key)	View Article
Semaglutide	Novo Nordisk's Wegovy - Semaglutide has been approved in India for use in adolescents aged 12 years and older with obesity, expanding its indication beyond adults. The once-weekly injectable GLP-1 therapy helps regulate appetite and supports significant weight loss when combined with diet and exercise. The approval addresses rising obesity rates among Indian teens and provides a new treatment option under medical supervision. It builds on Wegovy's established benefits in long-term weight management and cardiometabolic risk reduction.	Read the full article
Guselkumab (Tremfya)	The FDA approved a label update for TREMFYA - Guselkumab to include evidence of inhibiting structural joint damage in adults with active psoriatic arthritis. Phase 3b APEX study results showed significant reduction in joint damage progression along with symptom improvement. TREMFYA is now the only IL-23 inhibitor with this benefit, maintaining a strong safety profile. The update strengthens its position as a first-line option for preventing irreversible joint damage.	Read the full article
Telavancin (Vibativ)	Cumberland Pharmaceuticals has launched Vibativ - Telavancin injection in China following regulatory approval and a partnership with SciClone Pharmaceuticals. The antibiotic treats serious Gram-positive infections, including MRSA and hospital-acquired pneumonia. The launch expands access in a major market facing rising antimicrobial resistance challenges. It marks a significant step in addressing difficult-to-treat infections with a once-daily therapy.	Read the full article
Toripalimab + Chemotherapy	Junshi Biosciences announced Phase III NEOTORCH trial met primary endpoints (EFS & MPR), demonstrating significant efficacy in perioperative treatment of resectable stage II–III NSCLC and plans sNDA submission. Already approved in China for multiple oncology indications including perioperative treatment of resectable stage III NSCLC (anti-PD-1 mAb).	Read the full article
Durvalumab with BCG	The FDA has approved AstraZeneca's Imfinzi Durvalumab with BCG for BCG-naïve, high-risk non-muscle-invasive bladder cancer. The Phase III POTOMAC trial showed a 32% reduction in recurrence, progression, or death versus BCG alone. This marks the first new therapy in over 30 years for this setting, offering improved disease-free survival with no new safety concerns. The approval signals a potential shift in standard care for high-risk NMIBC patients.	Read the full article
Saroglitazar	Zydus Therapeutics received US-FDA Priority Review for NDA (supported by Phase IIb/III EPICS-III trial showing 56.7% vs 9.8% biochemical response) in primary biliary cholangitis (PBC). Not yet approved; holds Orphan Drug + Fast Track designations for PBC (rare autoimmune liver disease).	Read the full article

Molecule/Particular	Highlights (Other)	View Article
Venglustat	Sanofi's investigational drug Venglustat has received FDA Priority Review for treating type 3 Gaucher disease, with a decision expected by November 25, 2026. Phase III LEAP2MONO study results showed positive efficacy on neurological symptoms with a favorable safety profile. If approved, it would become the first US therapy targeting neurological manifestations of this rare disease. The drug's ability to cross the blood-brain barrier offers a potential breakthrough for unmet patient needs.	Read the full article
Licensing Agreement - Nestle & IdB	Nestle Health Science and IdB Holding have signed a licensing agreement to develop and commercialize VOWST in Europe, pending EMA approval. VOWST is an oral microbiota-based therapy currently approved in the US to prevent recurrent C. difficile infection in adults. The collaboration aims to expand access in Europe, addressing a high unmet need in a potentially life-threatening condition with limited treatment options. Clinical and regulatory efforts will support its potential approval and market entry.	Read the full article
Licensing Agreement - Pfizer & Innovent	Pfizer and Innovent Biologics signed a global licensing deal worth up to \$10.5 billion to develop 12 early-stage cancer therapies. Innovent will lead early development, with Pfizer taking over global trials and commercialization under a tiered structure. The partnership highlights growing global interest in China's biotech innovation pipeline. The deal includes \$650 million upfront and significant milestone-based payments.	Read the full article

Key News Highlights:

Molecule/Particular	Highlights (Key)	View Article
Semaglutide	Brazil's regulator Anvisa approved Ozivy, the country's first Semaglutide-based injector pen developed by EMS. The drug uses the same active ingredient as Ozempic, following patent expiry in Brazil. Production will take place in São Paulo with large-scale capacity, targeting market expansion. Commercial launch depends on pricing approval and potential inclusion in the public health system.	Read the full article
Resmetirom	Torrent Pharma plans India entry of US-approved MASH therapy (first-in-class) post patent expiry; currently conducting Phase III trials in India, with potential launch ~12–18 months after expiry (subject to regulatory approval). Already US FDA-approved (accelerated, Mar 2024) for non-cirrhotic MASH with fibrosis (F2–F3); no innovative therapies currently available in India, indicating strong unmet need.	Read the full article
Olezarsen (Tryngolza)	Sobi reported Phase III (CORE/CORE2) analysis showing ~85% reduction in acute pancreatitis risk and ~66% triglyceride reduction at 6 months in severe hypertriglyceridemia (≥880 mg/dL). Also achieved high response with ~85% patients reaching TG <10 mmol/L; additional reductions seen in remnant cholesterol and non-HDL-C. Regulatory status: Already approved for FCS (US/EU); US FDA priority review (sHTG; PDUFA ~30 Jun 2026) and EMA label extension under review → indicates expansion beyond rare indication into broader metabolic segment.	Read the full article
Elunetirom	Autobahn Therapeutics received US FDA Fast Track designation for adjunctive treatment of bipolar depression (Biolar I/II), indicating potential to address a significant unmet need. Being evaluated in	Read the full article

Phase II (AMPLIFY-BD) ongoing trial with topline data expected Q2 2026; also in Phase II for MDD (readout expected Q3 2026).

Other News Highlights:

Molecule/Particular	Highlights (Other)	View Article
Zopapogene imadenovec-drba (Papzimeos)	Precigen received US FDA orphan drug exclusivity (7 years; till Aug 2032) for recurrent respiratory papillomatosis (RRP). Already US FDA-approved (Aug 2025) as the first and only therapy for adult RRP; currently marketed in the US.	Read the full article
Sunvozertinib (Zegfrovy)	Dizal received NMPA China NDA acceptance with Priority Review for first-line treatment of EGFR exon20ins NSCLC based on Phase III (WU-KONG28) showing significant PFS benefit. Already approved in US and China for previously treated (post-platinum) EGFR exon20ins NSCLC; holds Breakthrough Therapy Designation (US & China) for first-line setting. Represents a potential first oral targeted therapy in 1L EGFR exon20ins NSCLC, addressing unmet need beyond chemotherapy.	Read the full article
M&A - Lilly and Curevo/LimmaTech/Vaccine Company	Eli Lilly announced acquisition of Curevo, LimmaTech Biologics, and Vaccine Company to strengthen its infectious disease portfolio, focusing on preventive vaccine-based strategies rather than treatment. Deal Size: ~Up to \$3.8Bn total (Curevo ~\$1.5Bn; LimmaTech ~\$780M; Vaccine Company ~\$1.55Bn).	Read the full article
M&A - Themis and MicroBiopharm Japan (MBJ)	Gujarat Themis Biosyn to acquire 100% stake (~₹1,300 Cr) to strengthen global CDMO and fermentation-based biotech capabilities (oncology APIs, biologics, ADC, plasmid DNA). MBJ operates across proprietary pharma + CDMO services (small molecules & biologics) with no specific product-level approvals highlighted; assets span oncology, antibiotics, immunosuppressants.	Read the full article
M&A - Skymap and State-run IMPC	Skymap Pharma is set to acquire state-run Indian Medicines Pharmaceutical Corporation for ₹121 crore. The deal aims to strengthen its presence in the domestic pharma market, particularly in government-linked segments. This acquisition is expected to enhance manufacturing and distribution capabilities. It reflects ongoing consolidation in India's pharmaceutical sector.	Read the full article

Please find below updates for 25th June 2026

Key News Highlights:

Molecule/Particular	Highlights (Key)	View Article
India GLP-1 Slowdown	Multiple Indian pharma companies – GLP-1 market momentum slows due to price war (including innovator price cuts), weak patient retention, and prescription plateauing. Existing landscape : Generic semaglutide launched post-patent expiry; market ~₹1,900–2,000 crore with rapid early growth now moderating. Key impact : Companies cutting sales targets (~25–30%), inventory build-up >₹100 crore, and delaying new launches amid affordability challenges and high patient drop-offs.	Read the full article
Palbociclib (Ibrance)	Pfizer – Received US FDA approval for use in combination with trastuzumab ± pertuzumab and endocrine therapy as maintenance treatment for HR+, HER2+ metastatic breast cancer. Approval based on Phase III PATINA study showing ~24% reduction in risk of disease progression/death; safety consistent with known profile (hematologic AEs most common). Existing approvals : Already approved globally for HR+, HER2- metastatic breast cancer across multiple lines; now expanded to include HER2+ population.	Read the full article
Selpercatinib (Tantrive)	Eli Lilly – Launched in India post CDSCO approval for treatment of RET-altered locally advanced/metastatic solid tumours (including NSCLC and thyroid cancers). Oral targeted therapy (BID dosing) demonstrating rapid, durable responses including CNS activity; addresses rare (~1–2% NSCLC) but actionable RET mutations in precision oncology. Existing approvals : Globally approved selective RET inhibitor across multiple RET-driven cancers; now introduced in India with biomarker-guided indication.	Read the full article
Keytruda / Keytruda Qlex + Sacituzumab (Trodelvy)	Merck/Gilead – Received US FDA approval as first-line treatment for PD-L1+ (CPS ≥10) advanced/metastatic TNBC in combination regimen. Phase III KEYNOTE-D19/ASCENT-04 showed ~35% reduction in progression/death risk with improved PFS (11.2 vs 7.8 months) and higher ORR vs chemo combination. Existing approvals : Keytruda widely approved across multiple cancers; Trodelvy approved for TNBC; this marks first PD-1 inhibitor + Trop-2 ADC combination in TNBC.	Read the full article
Olezarsen (Tryngolza)	Ionis Pharmaceuticals – Received US FDA approval for severe hypertriglyceridemia (sHTG) to reduce triglycerides and pancreatitis risk. Phase III CORE/CORE2 showed up to ~72% TG reduction and ~91% reduction in acute pancreatitis events, positioning as first targeted therapy with potential blockbuster outlook (>USD 2bn peak sales). Existing approvals : Previously approved for rare familial chylomicronemia syndrome (FCS); expanded to broader sHTG population.	Read the full article
Pirtobrutinib (Jaypirca)	Eli Lilly – Received positive CHMP opinion for EU approval for treatment of chronic lymphocytic leukemia (CLL) across all lines of therapy. Based on Phase III BRUIN CLL-313/314 trials demonstrating strong efficacy of non-covalent BTK inhibitor vs chemoimmunotherapy/other BTK inhibitors, with potential to improve outcomes across treatment settings. Already US FDA-approved for relapsed/refractory CLL/SLL and mantle cell lymphoma; EU label expansion would cover all therapy lines including treatment-naïve.	Read the full article
Teclistamab (Tecvayli) + Daratumumab	Johnson & Johnson – Received EMA CHMP recommendation for label expansion in combination for relapsed/refractory multiple myeloma (post ≥1 prior therapy). Phase III MajesTEC-3 showed ~83% reduction in progression/death risk and OS benefit (83.3% vs 65% at 3 years), with durable disease control and manageable safety profile. Existing approvals : Teclistamab approved in EU for heavily pretreated RRMM (≥3 prior lines); daratumumab widely approved backbone across MM settings.	Read the full article

Other News Highlights:

Molecule/Particular	Highlights (Other)	View Article
Avacopan (Tavneos)	Amgen – EMA CHMP recommended revocation of EU marketing authorisation for rare autoimmune vasculitis due to unfavourable benefit–risk profile. Decision linked to safety concerns (notably drug-induced liver injury cases) and insufficient benefit; regulators advise no new patients and transition of existing patients to alternatives.. Existing approvals : Previously approved for ANCA-associated vasculitis; US FDA had also proposed withdrawal earlier.	Read the full article
Biocon: Insulin Contracts Malaysia	Biocon and Duopharma have secured insulin supply contracts worth over ₹450 crore from Malaysia's Ministry of Health. The agreements include multi-year supply of recombinant insulin, insulin glargine and insulin aspart to support diabetes care. These contracts aim to improve access to affordable insulin for millions of diabetes patients in Malaysia. The partnership strengthens local manufacturing and long-term healthcare sustainability while reducing dependence on imports.	Read the full article
Generic - Oseltamivir phosphate	Alembic Pharmaceuticals – Received US FDA final approval for generic oral suspension for influenza treatment Existing approvals : Reference drug (Tamiflu) widely approved globally for treatment and prophylaxis of influenza.	Read the full article
Generic - Abiraterone acetate	Lupin – Received US FDA tentative approval for prostate cancer treatment (mCRPC indication) Existing approvals : Reference drug (Zytiga) widely approved globally for metastatic castration-resistant prostate cancer.	Read the full article
Pharma packaging materials (regulatory oversight)	Government of India – Plans to tighten regulatory oversight and quality compliance for pharma packaging materials. Existing framework : Packaging currently governed under Drugs & Cosmetics Act with varying quality controls across suppliers.	Read the full article

Other News Highlights:

Molecule/Particular	Highlights (Other)	View Article
Deflazacort Oral Suspension (Kymbee)	Upsher-Smith Laboratories – Launched oral suspension formulation for treatment of Duchenne muscular dystrophy (DMD) in patients ≥2 years. Already approved indication for DMD (US); new formulation expands administration options alongside existing tablets. Launch enhances treatment flexibility for pediatric patients (especially swallowing limitations) and is supported by patient access program.	Read the full article
M&A – Novartis and Antares	Antares Therapeutics + Novartis – Entered collaboration worth up to ~\$1.9B to develop precision cancer therapies. Includes \$105M upfront + up to \$1.8B milestones (development, regulatory, commercial) with tiered royalties on sales. Programs are preclinical/early-stage, leveraging Antares' discovery platform to target historically "undruggable" oncology pathways.	Read the full article
M&A – Eli Lilly and Centessa	Eli Lilly – Completed acquisition to strengthen its neuroscience portfolio, particularly in sleep-wake disorders including narcolepsy. Centessa brings a clinical-stage pipeline of orexin receptor 2 agonists, a novel mechanism targeting the underlying biology of wakefulness and potentially broader CNS disorders. Deal value: ~\$1.4 billion total, comprising upfront payment plus contingent value rights/milestone-linked payouts; strategically positions Lilly in a high-unmet CNS segment with first-in-class potential.	Read the full article
Collaboration - Lilly and Abbisko	Eli Lilly + Abbisko Therapeutics – Entered ~\$1.9B R&D collaboration for discovery and early development of small-molecule therapies across multiple targets. Programs are preclinical/early-stage; Abbisko to lead discovery with milestone-linked payouts covering development, regulatory, and commercial stages. Deal aims to accelerate global innovation pipeline, strengthening Lilly's oncology portfolio and Abbisko's partnering momentum.	Read the full article

Hi Harshit,

Today we ran the pipeline with other LLM model and modifying the things based on your last email.

Sharing the outputs here. PFA

Once you review this lets connect tomorrow to discuss further on this.

Thanks & Regards,
Rutvik
